

Building Operator Certification Earns Energy Skilled Recognition from the U.S. Department of Energy

BUILDING POTENTIAL is proud to announce that our Building Operator Certification (BOC) program has been officially recognized as “Energy Skilled” by the U.S. Department of Energy, in the category of HVAC Service & Maintenance.

This designation, awarded on behalf of DOE and Pacific Northwest National Laboratory (PNNL), confirms that our training equips participants with the energy skills needed for today’s growing clean energy and building operations workforce.

ENERGY SKILLED recognition highlights training programs that meet rigorous, nationally recognized standards for preparing workers with in-demand energy skills. For the BOC program, this milestone reflects our ongoing commitment to delivering high-quality, relevant training that prepares building operators to manage energy-efficient, high-performing buildings, and it gives our graduates a credential that carries added weight in the industry.

OUR PROGRAM will be featured on the [DOE’s Energy Skilled recognition page](#), and we’re excited to begin sharing this achievement with our stakeholders. We’re grateful to the U.S. Department of Energy and Pacific Northwest National Laboratory for this recognition, and to everyone in the BOC community whose work made it possible.
